Patent No. 6268334

GENERAL INFORMATION:

APPLICANT: La Thangue, Nicholas B

APPLICANT: Bandara, Lasantha R

TITLE OF INVENTION:
PETILE REFERENCE: 620-67

CURRENT APPLICATION NUMBER: US/09/308,935

CURRENT APPLICATION NUMBER: US/09/308,935

CURRENT APPLICATION NUMBER: L957-12-22

EARLIER PILING DATE: 1997-12-22

EARLIER PILING DATE: 1997-12-22

NUMBER OF FILING DATE: 1996-12-20

NUMBER OF SEQ ID NOS: 18

SOSTWARE: Patentin Ver. 2.1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ; OTHER INFORMATION: Description of Artificial Sequence: Synthetic US-09-308-935-5

US-09-308-935-2
; Sequence 2, Application US/09308935
; Sequence 2, Application US/09308935
; Patent No. 626834
; GENERAL INFORMATION:
; APPLICANT: La Thangue, Nicholas B
; TITLE OF INVENTION: Peptide antagonists of DP transcription factors
; TITLE OF INVENTION: Peptide antagonists of DP transcription factors
; TITLE OF INVENTION: Peptide antagonists of DP transcription factors
; TITLE OF INVENTION: 1999-02.7
; EARLIER APPLICATION NUMBER: DCT/GB97/03506
; EARLIER APPLICATION NUMBER: GB 9626589.7
; EARLIER APPLICATION NUMBER: DS 97.12-20
; SEQ ID NOS: 18
; SEQ ID NO 2
; LENGTH: 9
; Sequence 9, Application US/09308935
; Patent No. 626834
; GENERAL INFORMATION:
; APPLICANT: La Thangue, Nicholas B
; APPLICANT: Bandara, Lasantha R
; TITLE OF INVENTION: Peptide antagonists of DP transcription factors
; FILE REPRENCE: 620-67
; CURRENT FILING DATE: 1999-05-27
; CURRENT FILING DATE: 1999-12-22
; EARLIER APPLICATION NUMBER: PCT/GB97/03506
; EARLIER APPLICATION NUMBER: 999-12-22
; EARLIER PILING DATE: 1996-12-20
; CONTREST FILING DATE: 1996-12-20
; CONTREST FILING DATE: 1996-12-20
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ; OTHER INFORMATION: Description of Artificial Sequence: Synthetic US-09-308-935-9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ; OTHER INFORMATION: Description of Artificial Sequence: Synthetic US-09-308-935-2

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 4, Application US/09308935
; Sequence 4, Application US/09308935
; Patent No. 626834
; GENERAL INPORMATION:
    APPLICANT: La Thangue, Nicholas B
; APPLICANT: Bandara, Lasantha R
; TITLE OF INVENTION: Peptide antagonists of DP transcription factors
; TITLE REFERENCE: 620-67
; CURRENT APPLICATION NUMBER: US/09/308,935
; CURRENT FILING DATE: 1999-05-27
; EARLIER APPLICATION NUMBER: PCT/GB97/03506
; EARLIER PTLING DATE: 1997-12-22
; EARLIER PTLING DATE: 1996-12-20
; MUMBER OF SEQ ID NOS: 18
; SOFTWARE: PatentIn Ver. 2.1
; SEQ ID NO 4
; TYPE: PRT
                                                                                                                                                                                                                                JOHNSTON IN COURTY IN CALCULAGE

APPLICANT: La Thangue, Nicholas B

retinol-binding protein.";

Proc. Natl. Acad. Sci. U.S.A. 98:3710-3715(2001).

-!- FUNCTION: Intracellular transport of retinol.

-!- SUBCELLULAR LOCATION: Cytoplasmic (By similarity).

-!- TISSUE SPECIFICITY: Kidney.

-!- SIMILARITY: BELONGS TO THE FABP/P2/CRBP/CRABP FAMILY OF THANSPORTERS.

RANSPORTERS.

RINGEPPO: IPRO00463; Fatty acid BP.

RINGEPPO: IPRO00463; Fatty acid BP.

RINGEPPO: IPRO00566; Lipocln. CytrABP.
